## Abstract

Bird surveys to help identify and assess Key Biodiversity Areas (KBAs) were undertaken in Kurdistan in the winter and summer of 2008. The winter survey was from 19 January to 8 February and the summer survey from 7 May to 16 June, a total of 45 days. During these periods a total of 34 sites were surveyed in the North Iraq governorates of Sulaimani, Erbil, and Dohuk and 185 species of birds recorded. Of these, according to IUCN criteria, one species was globally endangered, three vulnerable and two near threatened. In addition, 32 species were considered to be of conservation concern in Iraq, based on a system developed by Richard Porter. Of the species observed, 124 were confirmed or probable breeding, whilst 59 were winter visitors. The KBA selection process used the Middle East Important Bird Areas (IBAs) criteria, which considers seven species-based categories.

## Keywords

Key Biodiversity Areas, birds, Kurdistan, Iraq

## Introduction

Kurdistan is located between 42°20' – 45°15' longitude and 37°23' – 34°20' latitude. It covers 65000 km<sup>2</sup>, approximately 15% of the total area of Iraq. Biogeographically, it lies in the Irano-Tauranian region (Irano-Anatolian sub-region) in the southeast of the western Palearctic realm, which consists mainly of mountainous areas in inner Anatolia and Armenia, the Iranian mountain plateau, and the greater part of Transcaspia (Eken et al. 2004).

In the past, limited surveys have been carried out in Iraqi Kurdistan. They revealed the presence of many areas important to birds. The aim of this study was to identify the Key Biodiversity Areas (KBAs) by surveying the bird populations and determining the trigger bird species. These are birds of global and/or regional importance from a conservation point of view, based on IUCN (2001) categories of Critically Endangered (CR), Endangered (EN), Vulnerable (VU), Near Threatened (NT), Least Concerned (LC), and Conservation Concern (CC), an additional category specific to Iraq, which is defined below.

The KBA selection process uses the Middle Eastern Important Bird Areas (IBAs) criteria, defined by BirdLife International (Evans 1994):

A: Important Bird Areas - Global importance

A1. Species of global conservation concern

A2. Restricted-range species

A3. Biome-restricted species

A4. Congregations

B: Important Bird Areas - Middle Eastern importance

B1: Regionally important congregations

B2: Species with an unfavorable conservation status in the Middle East

B3: Species with a favorable conservation status but concentrated in the Middle East

There are over 835 species of birds in the Middle East (Porter & Aspinall in prep.) of which over 400 have been recorded in Iraq (Salim et al. 2006). In the 2008 surveys in Kurdistan 185 species were observed.

## **Materials and methods**

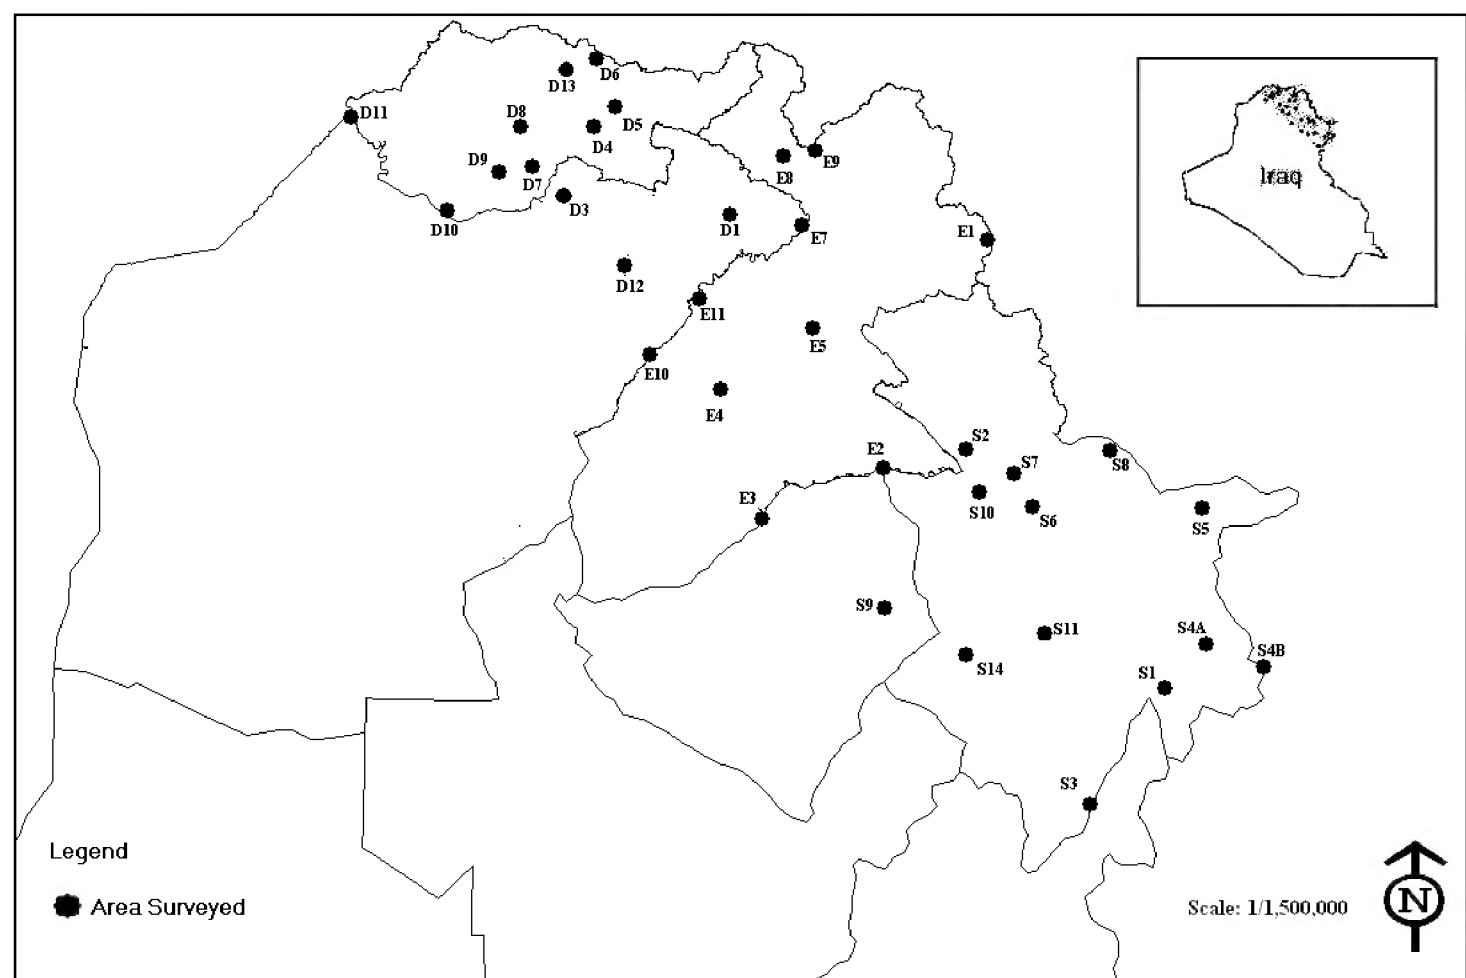

Bird observations were made using 8×42 Minox binoculars, a Canon 5D digital camera with 100–400 Sigma lens, and Kawa 500 mm spotting scopes (TSN-601). Depending on the type of sites visited, point, area and/or transect counts were taken at each site. All species were counted. This was often done from fixed points, e.g. when counting waterfowl on large lakes or searching for raptors in the mountains, but more frequently it involved a transect through the main habitats, along which all birds were counted. Species were identified using Salim et al. (2006); Porter et al. (1996); and Mullaney et al. (1999). The study was carried out at 34 sites in Sulaimani, Erbil, and Dohuk Governorates. Lake sites visited included: Darbandikhan Lake (S1), Dukan Lake (S2), Mosul Lake (D10), and Duhok Lake (D9). Watered valleys and gorge sites included Ahmad Awa (S4A), Awesar (S4B), Sargalu (S7), Chami Razan (S10), Penjween (S5), Haji Omran (E1), Smaquly and Ashaba Valley (E5A and E5B), Bakhma on the Big Zap River (E7), Barzan Area (E8), Kherazook (E9), Gali Zanta and Garbeesh (D1A and D1B), Ser Amadia and Sulav (D2A and D2B), Atrush (D3), Garagu (D5), Benavi (D6), and Sararu (D13). Mountainous areas with oak and/or pine forest sites included: Peramagroon Mountain (S6), Qara Dagħ (S11), Sharbazher Area (S13), Zawita (D7), Mangesh (D8). Lowland sites with farmlands and foothills

where: Chamchamal (S9), Zalm Area (S12), Sangaw (S14), Turaq Steppe (E4), Kalakchi and Khazar (D12A and D12 B). One marshland site, Altun Kopri on the Little Zap River (E3), was also visited. Lastly several wide and open rivers and their environs were included such as Kalar on the Diyala River (S3), Aski Kalak on the Big Zap River (E10), Taq Taq on the Little Zap River (E2), Bahraka on the Big Zap River (E11), and Fishkhaboor on the Tigris River (D11) (Fig. 1).

## Results and discussion

In January and February [Winter (W)] 2008 and May and June [Summer (S)] 2008, 185 bird species belonging to 49 families were recorded in the areas surveyed (Table 1). Six bird species were considered VU: *Aquila heliaca*, *Anser erythropus*, and *Falco naumani*; EN: *Neophron percnopterus*, NT: *Coracias garrulus* and *Emberiza cineracea*; and 32 species were categorized CC.

**Conservation Concern (CC):** The definition has been developed by Richard Porter in conjunction with staff members of Nature Iraq, in an attempt to determine those species for which Iraq has a special responsibility and which are a priority for conservation action. Species of the CC category include all globally threatened species; Iraqi endemics and near-endemics; those known to be seriously declining throughout or in most of their Eurasian/Middle Eastern range of distribution; those with a major

**Figure 1.** Map of areas surveyed.

**Table 1.** Status of birds recorded in Kurdistan, northern Iraq during the 2008 surveys, showing IUCN conservation status as evaluated by BirdLife International: LC (Least Concern), NT (Near Threatened), VU (Vulnerable), EN (Endangered), CC (Conservation Concern)].

Common Reed Bunting	<i>Emberiza schoeniclus</i>	LC	X		winter visitor

proportion (over 50%) of the world population breeding in the Middle East; and those which have, or are believed to have, important wintering populations in Iraq.

Unlike Europe, bird population data is often lacking in the Middle East and especially so in Iraq where the first comprehensive surveys have only started in the last four years (and during the last two years in Kurdistan). This lack of data means that decisions, which species qualify as being of CC are rather subjective. However assignments will be refined as more surveys and population assessments are made. For now, it provides the best judgment of our bird conservation priorities (Porter et al in prep.).

The region's three large wetlands are the Dukan Reservoir (completed in 1959), the Mosul Reservoir (completed in 1983), and the Darbandikhan Reservoir (completed in 1961). Two of them (Dukan and Darbandikhan) along with an unfinished dam site at Bakhma, were defined by Evans (1994) as IBAs. Based on the KBA surveys, Darbandikhan (S1) and Dukan (S2) Lakes match the KBA criteria. These sites regularly support globally threatened species; birds congregating in important numbers, either when breeding, on passage, or in winter; and sites important for species that are threatened or declining throughout or in large parts of their range in the Middle East. For example: 2% of the Middle Eastern population of *Larus genei* was seen during its breed-

ing season on these two lakes (Fig. 2). Mosul Lake (D10) also meets the criteria with 2% of the Middle Eastern population of *Phalacrocorax carbo* seen in winter at the lake and 18% of the Middle Eastern population of *Tadorna ferruginea* seen in winter and 1% of the Middle Eastern population of *Glareola pratincola* in summer. As with Dukan and Darbandikhan, this indicates that this lake regularly supports globally threatened species and birds congregating in important numbers, either when breeding, on passage, or in winter. Altun Kopri (E3) marshland in Erbil Governorate is another important KBA site, because birds congregate at this wetland site in large numbers.

Table 2 lists the 11 top sites for globally threatened species and/or species which are threatened locally or declining throughout all or large parts of their range in the Middle East. It also lists species that are restricted wholly or largely to the Middle East.

The following sites also meet the KBA criteria: Gali Zanta and Garbeesh Mountain (D1) Ser Amadiya (D2), Atrush (D3), Benavi (D6), Zawita (D7), Mangesh (D8), Fishkhaboor (D11), Sararu (D13); in Erbil Governorate: Haji Omran (E1), Smaquli and Ashab Valley (E5), Taq Taq (E6), Bakhma (E7), Barzan (E8), Kherazook (E9), Bahraka (E11); and in Sulaimani Governorate: Kalar (S3), Ahmad Awa (S4A), Hawraman (S4B), Penjween (S5), Peramagroon (S6), Sargalu (S7), Chamchamal (S9), Chami Razan (S10), Qara Dagħ (S11), and Sharbazher (S13). The remaining sites, which did not match KBA criteria for bird species as results of these surveys are: Kalakchi and Khazar (D12A and D12B), Duhok Lake (D9), Turaq Steppe (E4), Aski Kalak (E10), Sangaw (S14).

Destruction of habitats by gravel mining and tree cutting and other major threats to birds, such as uncontrolled hunting, were prevalent throughout the survey area, as

**Figure 2.** *Larus genei* at Dukan Lake (S2) in summer 2008 (photo by the author).

**Table 2.** Priority sites for bird conservation in Kurdistan, Iraq.

Site	Description
Darbandikahn Lake (S1)	Lake/Reservoir ecosystem on the Diyala Watershed southeast of Sulaimani - 25000 ha. This site supports the globally threatened Imperial Eagle <i>Aquila heliaca</i> – 8 counted in winter and Egyptian Vulture <i>Neophron percnopterus</i> . Other wintering birds include Smew <i>Mergellus albellus</i> , Common Goldeneye <i>Bucephala clanga</i> , Great Black-headed Gull <i>Larus ichthyaetus</i> and Wallcreeper <i>Tichodroma muraria</i> . White Storks <i>Ciconia ciconia</i> nest and there is a large breeding colony of Slender-billed Gulls <i>Larus genei</i> (760 birds counted).
Dukan Lake (S2)	Lake/Reservoir ecosystem on the Upper Little Zap Watershed northwest of Sulaimani - 7500 ha. This site holds small numbers of the globally threatened Lesser White-fronted Goose <i>Anser erythropus</i> and Imperial Eagle <i>Aquila heliaca</i> in winter when there are large flocks of Great Black-headed Gulls <i>Larus ichthyaetus</i> and large concentrations of larks. Breeding species include White Storks <i>Ciconia ciconia</i> , Egyptian Vultures, Slender-billed Gulls (4500), Gull-billed Terns <i>Gelochelidon nilotica</i> and passerines with a restricted range in the Middle East, such as Eastern Rock Nuthatch <i>Sitta tephronata</i> .
Mosul Lake (D10)	Lake/Reservoir Ecosystem on the Tigris north of Mosel – 470 km <sup>2</sup> . An important site holding in winter small numbers of Lesser White-fronted Goose <i>Anser erythropus</i> and over 9,000 Ruddy Shelduck <i>Tadorna ferruginea</i> . There are very important breeding colonies of Collared Pratincole <i>Glareola pratincola</i> (870 individuals), Slender-billed Gulls <i>Larus genei</i> (630), Gull-billed Tern <i>Gelochelidon nilotica</i> (760), Common Tern <i>Sterna hirundo</i> (350) and Little Tern <i>Sternula albifrons</i> (200)
Altun Kopri (E3)	Riparian marshland on the Little Zap River bordered by steppe ecosystem south of Erbil – 10 km <sup>2</sup> . This site holds large numbers of waterfowl, notably Eurasian Coot <i>Fulica atra</i> with 11,500 counted. This varied habitat holds a large and diverse population of breeding/probable breeding birds including Little Grebe <i>Tachybaptus ruficollis</i> , Squacco Heron <i>Ardeola ralloides</i> , Purple Heron <i>Ardea purpurea</i> , Marsh Harrier <i>Circus aeruginosus</i> , Pin-tailed Sandgrouse <i>Pterocles alchata</i> , Pied Kingfisher <i>Ceryle rudis</i> , Penduline Tit <i>Remiz pendulinus</i> , Great Reed Warbler <i>Acrocephalus arundinaceus</i> and Dead Sea Sparrow <i>Passer moabiticus</i>
Barzan (E8)	This is a tribal protected area located to the northeast of Erbil City which represents mountains with woodlands of <i>Quercus</i> and the presence of some streams and rivers. The threatened Lesser Kestrel <i>Falco naumanni</i> and European Roller <i>Coracias garrulus</i> breed as well as Griffon Vulture <i>Gyps fulvus</i> , Booted Eagle <i>Aquila pennata</i> , Lesser Spotted Woodpecker <i>Dendrocopos minor</i> and several passerines restricted wholly or largely to the Middle East such as Eastern Rock Nuthatch <i>Sitta tephronota</i> .
Chami Razan (S10)	This site is located approximately 30 km to the northwest of Sulaimani City. It consists of a long valley with a stream that flows from the northeast down to the Little Zap and contains hills and rocky ridges with sparse oak woodlands. This site holds a good population of breeding birds of prey, notably Egyptian Vulture <i>Neophron percnopterus</i> and Griffon Vulture <i>Gyps fulvus</i> , Short-toed Eagle <i>Circaetus gallicus</i> , Bonelli's Eagle <i>Aquila fasciatus</i> , Long-legged Buzzard <i>Buteo rufinus</i> and probably Steppe Buzzard <i>Buteo buteo vulpinus</i> . European Roller <i>Coracias garrulus</i> may breed and there is a good breeding population of passerines, wholly or largely restricted to the Middle East, including Masked Shrike <i>Lanius nubicus</i> , Sombre Tit <i>Poecile lugubris</i> , Red-tailed Wheatear <i>Oenanthe xanthopyrmyna</i> and Eastern Rock Nuthatch <i>Sitta tephronota</i> .

Site	Description
Qara Dagħ (S11)	This area located south of Sulaimani City and represents a mountainous area with many gorges, rocky slopes and valleys covered mainly by oak forest. There are farmlands and villages as well. This site holds breeding populations of the globally threatened Egyptian Vulture <i>Neophron percnopterus</i> and Lesser Kestrel <i>Falco naumani</i> as well as Griffon Vulture <i>Gyps fulvus</i> , Short-toed Eagle <i>Circaetus gallicus</i> and Long-legged Buzzard <i>Buteo rufinus</i> . Other breeding birds include European Roller <i>Coracias garrulus</i> , Masked Shrike <i>Lanius nubicus</i> , Woodchat Shrike <i>Lanius senator</i> (75 individuals counted) and Red-tailed Wheatear <i>Oenanthe xanthopyrma</i> .
Ser Amadia (D2)	This is a mountainous area with rocky cliffs, gorges, and a valley with streams; plant coverage is <i>Quercus</i> , <i>Juniperus</i> , <i>Puphus</i> with grasses. The globally threatened Lesser Kestrel <i>Falco naumani</i> and European Roller <i>Coracias garrulus</i> breed as well as Eurasian Nuthatch <i>Sitta europaea</i> , Western Rock Nuthatch <i>S. neumayer</i> Eastern Rock Nuthatch and Long-tailed Tit <i>Aegithalos caudatus</i> .
Haji Omran (E1)	This area is located on the Iran/Iraq border northeast of Erbil City and is surrounded by a number of mountains such as Sakran in the south, Halgurd in the west and Gardamn in the north, with hills, streams and meadows offering high plant diversity. It is considered one of the most important plant areas in Iraq. This site holds several breeding species restricted wholly or largely to the Middle East including Finsch's Wheatear <i>Oenanthe finschii</i> . Black-eared Wheatears <i>Oenanthe hispanica</i> occur in good numbers
Sararu (D13)	Situated about 46 km northeast of Dohuk City and about 8 km <sup>2</sup> in size. It is a mountainous area with a valley including farmlands with walnuts and other trees. Breeding species include Lesser Kestrel <i>Falco naumani</i> and a diverse population of passerines including Masked Shrike <i>Lanius nubicus</i> , Eastern Rock Nuthatch <i>Sitta tephronota</i> , Sombre Tit <i>Poecile lugubris</i> and Long-tailed Tit <i>Aegithalos caudatus</i> . Levant Sparrowhawk <i>Accipiter brevipes</i> probably breeds.
Benavi (D6)	The site lies at 1,500–1,700 m and includes a valley containing Benavi village and the adjacent mountain ridge. The slopes are rocky and grassy, with a rich herb flora and isolated <i>Quercus</i> shrubs and trees. Benavi holds a good population of several species that are restricted wholly or largely to the Middle East, including Finsch's Wheatear <i>Oenanthe finschii</i> and Sombre Tit <i>Poecile lugubris</i> .

is the case for Iraq as a whole. These sites should be monitored for and protected from these threats.

## Acknowledgements

The author would like to thank Richard Porter for his help in guiding the survey and commenting on this paper. The surveys supporting the Key Biodiversity Project were conducted by Nature Iraq in partnership with the Iraq and Kurdistan Ministries of Environment. In addition, the author wishes to thank Azzam Alwash, the director of Nature Iraq, for his support of the project. Bird observations during the period covered by this paper were led by the author and this paper draws on the field report developed by Ararat et al. (2008). Members of the 2008 Nature Iraq KBA survey team in Iraqi Kurdistan included: Adnan Ali Mer Jamsher, Haider Ibrahim, Ibrahim M. Abid, Korsh Ararat, Laeth Ali Abed, Mu-

ammed Saed Muhammed Noori, Muzher Shibil, Nora Jameel, and Saman Abdul Rahman. Finally the author wishes to thank Mike Evans of BirdLife International for helpful advice and Anna Bachmann, the project manager of the KBA Project as well as Christina Dela Cruz, Justin Davies, & Leah Malone who assisted with report editing. Funding for the project was provided by the Italian Ministry of Environment, Land & Sea.
